

PnS Pack

Fully secure collaborative solutions and data transfer

Sending and receiving documents of any size and any nature, with many actors, both inside and outside the company, has become a daily activity.

Classic messaging tools do not meet these new requirements: no security, far too small attachment size, no central hosting of documents.

PnS Pack allows to send and receive your documents and to organise collaborative workspaces in full security.

PnS Pack in short

- Appliance or software appliance hosted on your premises, based on a LAPP system: Linux, Apache, PostgreSQL, PHP
- Compatible with all clients (PC, Mac, Linux) without any installation
- Can be used from a browser anywhere in the world
- Unlimited file size
- Security: encryption, authentication, firewall, anti-virus, logs
- LDAP support
- SMS strong authentication

PnS Pack
Now you can trust the Internet

Why use PnS Pack?

To organise and control sharing and transferring confidential or large documents between your company and the outside world, and to host these documents in absolute confidence.

PnS Pack is your "document firewall".

Solution benefits

- Software and data hosted within the company
- Control of user accounts
- Data security
- Graphic customisation
- Turnkey solution
- Integrates into the existing systems
- Easy learning curve

PnS Pack: architecture

PnS Pack is an appliance or a software appliance, hosted on your premises. It is based on robust hosting standards: Linux, Apache, PostgreSQL and PHP.

The **PnS ConfidenceMail** application is at the heart of **PnS Pack**. Very easy to use, it is compatible with all browsers on the market and requires no local installation or configuration.

Communication with clients is done only through the HTTP protocol and can therefore pass through any firewall. **PnS ConfidenceMail** can be used even when JavaScript is not enabled.

To ensure the safety of your documents, all exchanges are HTTPS encrypted. The **PnS Pack** solution includes also a firewall and an anti-virus.

PnS Pack: integration

The **PnS Pack** solution is a complete "turnkey" solution. After a study of your environment and your needs, it will be configured and installed in your company by our personnel.

PnS Pack can be installed as a front-end server or behind a firewall.

One or several LDAP directories of your company can be used, while applying filtering criteria.

Strong authentication SMSs can be emitted directly from **PnS Pack** or from a remote system.

PnS ConfidenceMail administration is simple and is done from a browser. It is of course done in secured mode.

In case of loss of connectivity, a monitoring system sends alerts to administrators.

PnS Pack: features

- Unlimited number of users
- Unlimited number of files, repositories and directories
- **Files**
 - ✓ File size greater than 2 GB
 - ✓ Granted access to files and monitoring of these downloads
 - ✓ Permissions to upload, and monitoring
 - ✓ Simple version management
- **Repositories**
 - ✓ Moderation
 - ✓ Receipt notification
 - ✓ Configurable file life span
 - ✓ Filtering of allowed file types

Graphic customisation

We customise **PnS Pack**'s images and graphic charter to your colours.

Thus, and because it uses your own sub-domains and domains, **PnS Pack**'s identity is truly yours.

Your company strengthens its image of openness and security.

now you can trust the Internet®
